

# Brief instructions: Netviewer Chat function

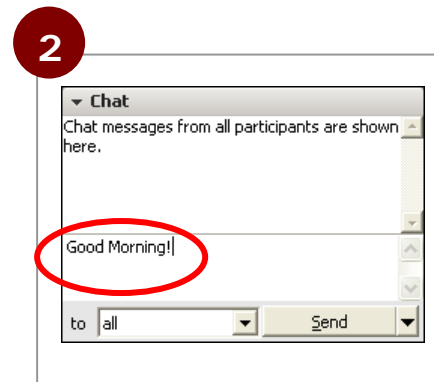

The Netviewer Chat function allows you to send written messages to other participants – either to all or only selected session partners.

The tray will blink to inform you and your session partners that a new message has been received.

Click on the *Chat* tray's title bar to open the tray.

Enter the chat text under the line.

Click on the arrow next to *all* and choose from the drop-down menu if you want to send your message to all or only a selected session partner.

Click on *Send* or press [Enter].
