

Sending an e-mail invitation to join a Netviewer session

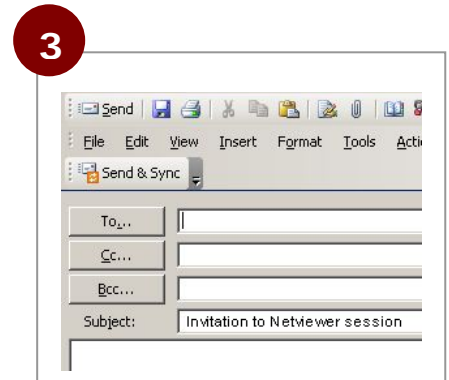

If a Netviewer session has already begun, you can send your session partner an e-mail invitation to join the session. The session partner must only click on the automatically generated link contained in the e-mail to join the session directly.

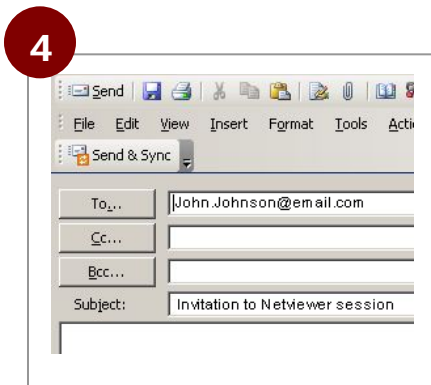

After starting the session as the Moderator, click on the Invitation button in the Mini-panel.

A context menu will open. Select *Send e-mail invitation to session*.

The draft e-mail will be opened in your e-mail program. The e-mail contains a link. When the participant clicks on it, he will enter the session automatically.

Enter the recipient(s) of the e-mail and add any necessary information, such as attachments.

Send the e-mail.
