

File transfer

Session partners can exchange files during a Netviewer session. To do this, use the *File Transfer* tray in the Control Panel.

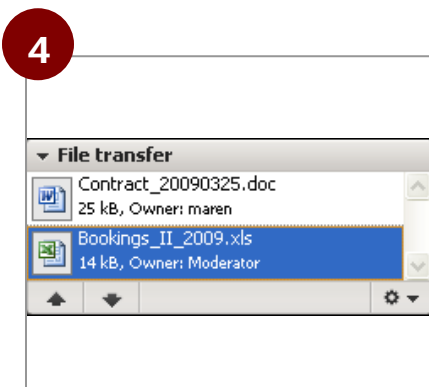

1 Click on the *File Transfer* tray's title bar to open the tray.

2 Click on the arrow pointing upward. In the "Open file" dialog that appears, select the files or folder structures that you would like to upload.

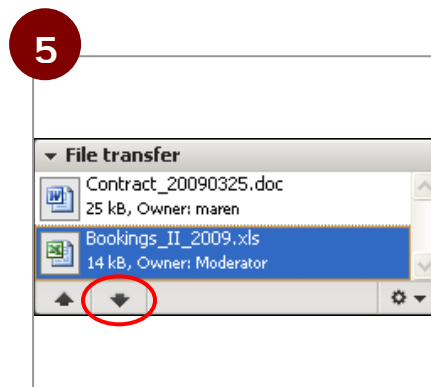

3 The tray will blink to inform the session partner that new files/folders have been made available.

4 Select the files that you would like to download.

To select and download several files/folders, press and hold the [Ctrl] key while clicking on each desired file or folder.

5 Click on the arrow pointing downward.

In the "Save as..." dialog that appears, select the desired location to save the files or folders.
